Sensor access
Various

Vertical Jefferies tubes are accessed via ladders, which run the entire length of the tubes.

Access to the vertical tubes can be sealed off at each deck, aiding both security and safety.

Jefferies Tube Conduit

Various

Access panels run along the interior of the tubes.

Jefferies tubes intersect regularly.

Though unnamed at the time, Jefferies tubes were first seen aboard *CONSTITUTION*-class starships of the 2260's. By the time the *U.S.S. ENTERPRISE NCC-1701-D* was commissioned, these crawl-spaces had acquired the name of Jefferies tubes.

Doors within the Jefferies tubes can be used to block off sections of the network if necessary.

There are entrances to Jefferies tubes at regular intervals all over the ship, providing access to the many systems.

Cargo bay as Emergency Ward

Emergency only
